

HortiStar

**Silicate fertiliser for foliar application.
Organosilicon compound, 19% Silicon.**

A unique combination of active silicon compounds and stabilisers

For use on all crops

- Provides available silicon, "The forgotten element."
- Aids uptake and utilisation of all nutrients.
- Regulates leaf water content reducing drought stress maintaining photosynthesis at near optimum levels.
- Strengthens leaf cells increasing their physical resistance to pests and pathogens.
- Provides physical control of many insect pests. Intimate contact with the pest is vital to gain control action.
- No harvest interval when used alone.
- Excellent inherent spreading and penetrating properties.

Application (used alone):

For field application apply 1 litre of HortiStar per ha in 400 to 1000 litres of water.

For small areas add 10ml of HortiStar to 10 litres of water and apply over 100m², or to runoff on larger crops.

Combined Application (used in combination with foliar fertilisers or pesticides):

Read pesticide label prior to use, use only where pesticide permits tank mixing with silicates.

Always dilute pesticide first prior to adding the HortiStar, avoid mixing the concentrates.

For combined field application apply 250ml of HortiStar/ha in 400 to 1000 litres of water.

For small areas add 2.5ml of HortiStar to 10 litres of water and apply over 100m², or to runoff on larger crops.

Do not store diluted HortiStar, use within 24 hours of mixing.

Clean spray equipment after use in accordance with safe washing practice.

Do not use spreaders or wetting agents in combination with HortiStar.↑
