Rates of Use:

HortiMix Blueberry Special can be dissolved at the rate of 10kg per 100 litres of stock solution. This stock solution is then dissolved at the rate of 1:200 (0.5%) to produce fertigation solution of 0.5g/litre. The E.C. of the solution will be 0.6mS/cm plus local water E.C. This is suitable for constant feeding.

For periodic feeding and during heavy cropping the feed strength can be increased to 1g/litre by reducing the dilution ratio to 1:100 (1%) with E.C. of 1.2S/cm plus local water E.C.

For further guidance please ask your HortiFeeds Technical Representative.
